Chroma's 17020 is a high precision system specifically designed for secondary battery module and pack tests. Highly accurate sources and measurements ensure that the test quality is suitable for performing repetitive and reliable tests crucial for battery modules/packs, incoming, and outgoing inspections as well as capacity, performance, production, and qualification testing.

The system architecture of the Chroma 17020 offers regenerative discharge capabilities designed to recycle the electric energy sourced by the battery module either back to the channels in the system performing a charging function or to the utility mains in the most energy efficient manner. This feature saves electricity, reduces the facilities thermal footprint, and provides a green solution.

The Chroma 17020 system is equipped with multiple independent channels to support dedicated charge/discharge tests on multiple battery modules/packs, each with discrete test characteristics. Channels can easily be paralleled to support higher current requirements. This feature provides the ultimate in flexibility between high channel count and high current testing.

The Chroma 17020 advanced hardware design creates seamless transitions between maximum charge and maximum discharge (or maximum discharge and maximum charge) with a rapid 50 ms conversion. This feature allows for charge/discharge modes that simulate real world scenarios.

The Chroma 17020 system has flexible programming functions and may be operated with Chroma's powerful “Battery Pro” software. With the Battery Pro software, cycling tests from basic charge or discharge to complex drive cycle testing can be created and utilized for each channel or channel groups. A thermal chamber control can be integrated into a profile and triggered by time or test results yielding a dynamic profile. Battery Pro's features allow quick and intuitive test development, eliminating the need of tedious scripting or programming by a software engineer.

The Chroma 17020 system has multiple safety features including Battery Polarity Check, Over Voltage Protection, Over Current Protection Check and Over Temperature Protection to ensure protected charge/discharge testing. In the unlikely event of power or computer communication loss, data is securely stored in system non-volatile memory protecting against potential data loss and allowing for continuous flow after restart.

Applications
- EV battery module
- Electric scooter
- Electric bike
- UPS
- Energy storage battery
- Power tools
- Car battery
- Lead-acid battery
Independent Channels
- Independent channel operation
- Independent testing data
- Independent protection
- Independent testing process

Operating Mode
- Constant current (CC), voltage (CV), power (CP), and voltage-limit current (CC-CV) mode
- Waveform current mode
- DCIR mode
- Rest

Cut-off Conditions
- Time (s), Capacity (Ah), Voltage (V), Current (A), Temperature (°C)
- Channel data in data logger (Option)

Protection Conditions
- Over voltage (V), over current (A), over temperature (°C), and over capacity (Ah) protections
- Under voltage protection (V)
- Wire loss protection (∆V)
- ∆V/∆I (V/A) protections
- Delta Protection: Protect internal short of battery cell
- Channel data in data logger (option)

Testing Data Records
- Detail report: STEP / TEST TIME / TEST TIME ID / Cycle / Loop / STEP MODE / STEP TIME / VOLTAGE(V) / CURRENT(A) / CAPACITY (Ah) / Energy(WH) / TEMPERATURE (°C) / Data Logger Channel (optional)
- STEP / STEP NO / LOOP / CYCLE / STATUS / STEP START TIME / STEP MODE / CUT OFF VOLTAGE(V) / CUT OFF CURRENT(A) / CUT OFF CAPACITY (Ah) / DCIR(mOhm) / Energy(WH) / TEMPERATURE (°C) / Data Logger Channel (optional)

Compact Size
The dimensions of a regenerative system are smaller when compared to a system that has to dissipate energy.

Continuous Transition
- Continuous charge and discharge transition: No time delay to transit from charge to discharge. The user can verify the battery pack for a design limit.
- Continuous CC-CV transition: No overshoot current or voltage to damage the battery when transiting CC-CV

Response Time
- 50ms trip time between maximum charge and discharge current
- Smooth current without overshoot to avoid damaging the battery

Temperature Measurement
- Temperature measured for each channel within the range of 0~90°C ± 2°C
- 4 sets of measurements (max.) per channel to measure the battery surface temperature

Test for battery pack with split connections
For some battery pack designs, the charge and discharge ports are split into two connectors. The user can set the 17020 software to select charge/discharge using either a single connector or two connectors separately.

Data Recovery
- 60 min of temporary data storage when sampling time is 1 sec.
- Save the test settings to resume after power failure is recovered

DRIVING CYCLE SIMULATION
The battery pack is always used under quick and un-regular current condition. The system simulates real conditions on battery pack via working condition simulator.
- Import dynamic charge/discharge power or current waveforms to simulate the DRIVE CYCLE or actual application
- Support Excel (xls) format
- 720,000 points of driving profile memory to save the waveform profile in each channel
- Minimum ∆t : 10ms

High Accuracy Capacity Calculation
Voltage/current sampling rate of 50kHz used for calculating capacity ratings in dynamic waveform mode
- V/I sampling rate : 50KHz (per 20µs)
- Integrate calculus: I for capacity; VxI for energy
**TEST ITEMS**

- Drive cycle simulator
- Learning test for manufactory
- Life cycle test
- Balance control test
- DCIR test
- Capacity test
- Performance test
- Reliability test
- Over charge/discharge test
- Thermal test

**PARALLEL CONTROL - UP TO 60 CHANNELS**

Supports Various Capacity Batteries in Parallel

Battery companies have various capacity configurations. Some customers may purchase a high power system to test all capacity battery packs. The downside is that the measurement accuracy is not sufficient for small-capacity battery packs. Using Chroma’s system, customers can test under individual or parallel channels for higher capacity battery packs. The system supports different capacity batteries from a base system configuration.
Recipe Editor
- 255 charge/discharge conditions
- Sets dual layer loops (cycle & loop) with 9999 loops per layer
- Able to edit dynamic charge/discharge waveform with 10ms current switching speed
- Testing Step: CV / CC / CP / CC-CV / Waveform current / DCIR
- Cut-off conditions (time, current, capacity, cut-off voltage, cut-off current, etc.)
- Next Step: Next / End / Jump / Rest

Statistical Reports
- Generate detailed report and step report
- Customized report format
- Exports test reports in PDF, CSV and XLS
- Graphical report function
- Report analysis Function: Users can create customized reports such as life-cycle report, Q (AH-V(V)) report, V(V)/I(A)/T(℃)-time report and etc. through the user-defined X and Y axis parameters.
- Real-time browsing test reports of each channel
- Diversified reports & charts: Real-time report, Cut-off report, X-Y scatter chart report

Software Integration
- Thermal chamber: Synchronize temperature control with charge/discharge profile
- Data logger: Temperature or voltage data record that can be used for setting Cut-off and protection conditions

The 17020 test system is specifically designed to meet the diversified requirements for testing secondary battery packs with high safety and stability. Charge and discharge protection will abort tests when abnormal conditions are detected. Data loss, storage and recovery are protected against power failure.

- Real-time multi channel battery pack status browse
- Icon Manager: Test status of each channel is managed through different icons, easy to read and understand
- Authority management: It sets the user’s authority for operation
- Fault record tracking: It records the abnormal state of each channel independently

CHROMA Data logger 51101 provides synchronized sampling with constant data acquisition rate.

Minimun : 200 ms
Interface : Ethernet
1. Battery charge/discharge controller  
   Model 69200-1  
2. AC/DC Bi-directional converter  
   Model A691101  
3. Regenerative charge/discharge Tester  
   Model 69200 Series  
4. Thermal/Multi-function Data Logger  
   Model 51101-64 (option)  
5. BMS Communication Unit  
   Model A692000/A692001  
* Support other equipment upon requests  

### SYSTEM CONFIGURATION  

PANEL DESCRIPTION - REGENERATIVE CHARGE/DISCHARGE TESTER  

- **Model 69206-60-8**  
  - **1. Channel No**  
  - **2. Charge Status Indicator**  
  - **3. Discharge Status Indicator**  
  - **4. UUT Connection Indicator**  
  - **5. Parallel Indicator**  
  - **6. Failure Indicator**  
  - **7. Power Switch**  
  - **8. Channel DIP Switch**  
  - **9. Parallel Connector**  
  - **10. Temperature Meas. Terminal**  
  - **11. Voltage Meas. Terminal**  
  - **12. Charge/Discharge Output/Input Connector**  
  - **13. Charge Output Connector**  
  - **14. Controller Connector**  
  - **15. DC BUS Terminal**  
  - **16. AC Input**  

The driving cable can connect the front panel or rear outlet, users can choose their own.
BATTERY SIMULATION FUNCTION

The Chroma 17020, equipped with Battery Charging/Discharging Tester and Battery Simulators, can test the battery pack and battery pack connection related products. When a product is still under development and the supplier’s battery is not ready, the 17020 can simulate the battery to verify whether or not the system is functioning normally. In addition, the 17020 can control the SOC status of different batteries. Users can download different battery curves to the 17020 to test the DUT for charging and discharging status. The 17020 can also perform battery and DUT collocation evaluation tests in advance that can apply to the motor driver of vehicle start-stop systems, light EV electric controllers, and car-mounted chargers, etc.

**Battery Pack Simulating Function**
- Multi-Channel Battery Pack Simulation
- Battery Pack Charging/Discharging Simulation
- Battery Behavior Curve Setting
- Starting Voltage and Capacity Initializing
- Battery Pack Total Capacity Setting
- Charging and Discharging Efficiency Setting
- Battery DCR Simulation
- Battery Pack Initialization Cycle Simulation
- Single Channel Bidirectional Power Supply

**Battery Pack Protection**
- OCP
- OVP
- Battery High Voltage/Power Warning
- Battery Low Voltage/Power Warning
- Battery OVP/OPP
- Battery LVP/LPP

**Single Channel Bidirectional Power Supply**
- Voltage /Current /Power Display
- Voltage /Current Setting
- Pre-charge Function: Set the time required to generate voltage

**Real Time Test Data Display**
- Voltage /Current /Power Value Display
- Voltage /Current /Power Picture Display
- Battery Pack Charging/Discharging Curve Display
- Testing Report Output Function

**Motor Driver Testing for Vehicle 48V Start-stop System**

**Battery Pro - Operation Interface of the Battery Simulator**

An optional battery simulator can be used with the 17020 to charge and discharge the bidirectional power supply. Furthermore, it can set the battery capacity, DCR, and V-SOC curve to be downloaded for charger, inverter, and motor driver testing via the proprietary software enclosed.

**Battery simulator main window**
**DCR setting**
**Battery characteristics V-SOC curve setting screen**
