Modular DC Power Supply

MODEL 62000B SERIES

Key Features:
- Voltage range: 1 ~ 150V
- Current range: Up to 2000A (System)
- Power range up to 1.5KW per module
- Power range up to 120KW per system
- High Power Density (464 mW/cm³ = 7.13 W/in³)
- N+1 Redundancy
- Hot-swappable
- Ideal for Burn-in & Plating
- Remote Sense
- Remote ON / OFF
- CAN Bus Control
- DC OK Signal Output

MODULAR DC POWER SUPPLY
MODEL 62000B SERIES

Chroma's new 62000B series of Modular DC Power Supplies offer many unique features for Burn-in and plating/electrolysis applications. The features include a N+1 redundancy, high power densities, hot-swappable maintenance, remote ON/OFF and programmable control via the CAN bus.

The 62000B family offers 5 types of power module with ranging from 1V to 150V, current from 10A to 90A, and offers two mainframe type of six and three position. The six position mainframe can envelop in up to six power modules paralleled operation for 9KW power output. The 62000B can easily parallel up to fourteen mainframe to 120KW with current sharing and CAN bus control for bulk power applications.

The Modular DC Power Supplies of 62000B are very cost effective with high power density and low current ripple. These instruments have been designed for burn-in applications such as the LCD panels, DC-DC converters, power inverters, notebook computers, battery chargers and many other types of electronic devices.

Modern power factor correction circuitry is incorporated in 62000B providing an input power factor above 0.98 to meet the IEC requirements. This PFC correction circuitry not only reduces the input current draw and to greatly reduce generation of input current harmonics. Optional graphic Soft Panels and CAN bus control allow for control and monitoring of the power system using an easy to use graphical interface.
**HOT-SWAP OPERATION**

Equipped with the functionality of N+1 redundancy and hot-swap, the 62000B Series of modular DC power supplies are most applicable for 24 hours non-stop applications such as the SMD plating production lines, as well as product life burn-in test for IT products like DC converters, LCD backlight inverters and routers.

For continuous operation applications the modular hot-swap design allows engineers to replace the failure unit on-site without shutting down the entire system.

**HIGH POWER APPLICATIONS WITH CSU**

The 62000B modular power supplies are capable of providing high power output up to 120KW/2000A with minimal specification degradation via CSU (Control & Supervisor Unit). Each chassis is designed to accommodate a maximum of 9KW and include current sharing capability to ensure system stability. In addition, for convenient control of even large power systems, a CSU is provided to set and display output and protection circuits via a standard CAN bus communication protocol.

Note: Contact the factory for more information on customization of high power system (>2000A).

**A620007 CSU Key Features:**

- Stand-alone controller for paralleled 62000B DC power for bulk power
- Digital encoder knobs and function keys
- Simultaneous display of output voltage and current
- Standard Analog programmable interface
- Standard CAN Bus
- Optional Ethernet interface
- User define I/O interface

**CAN BUS’S ADVANTAGES**

Controller Area Network (CAN) is a multicast shared, differential serial bus standard. CAN was specifically designed to be robust in electromagnetically noisy environments and can utilize a differential balanced line like RS-485. Introduced by Bosch in 1986 for in-vehicle networks in cars, it is used in myriad applications including factory automation, building automation, aircraft and aerospace as well as in cars, trucks and buses. CAN bus replaced bulky wiring harnesses with a two-wire differential cable. CAN provides services at layers 1 and 2 of the OSI model and uses a broadcast method for placing frames on the wire. CAN provides low-speed, fault-tolerant transmission of 125 Kbps up to 40 meters, which can function over one wire if a short occurs. Transmission without fault tolerance is provided up to 1 Mbps and 40 meters, and distances up to 1 km are achieved with bit rates of 50 Kbps. Bit rates up to 1 Mbit/s are possible at network lengths below 40m. Decreasing the bit rate allows longer network distances (e.g. 125 kbit/s at 500 m).
PANEL DESCRIPTION

Model 62000B Series

FRONT PANEL
1. OUTPUT ENABLED LED
2. FAULT INDICATOR
3. OUTPUT VOLTAGE READOUT
4. VOLTAGE TRIMMER (1V-100%)
5. OUTPUT CURRENT READOUT
6. CURRENT TRIMMER (1A-100%)
7. OUTPUT ENABLE/DISABLE SWITCH

REAR PANEL
8. CURRENT SHARING CONNECTOR (FOR MAINFRAME)
9. REMOTE SENSE CONNECTOR
10. I/O CONNECTOR (INCLUDES REMOTE ON/OFF, DC OK, AUX POWER)
11. CAN DIP ADDRESS SWITCH
12. CAN BUS COMMUNICATIONS PORT (OPTIONAL)
13. OUTPUT TERMINALS
14. AC INPUT TERMINAL BLOCK

Model A620007

FRONT PANEL
1. OVP INDICATOR
2. VOLTAGE READOUT
3. OTP INDICATOR
4. AC-FAULT INDICATOR
5. CURRENT READOUT
6. MODULE ERROR INDICATOR
7. CV MODE INDICATOR
8. CC MODE INDICATOR
9. ON/OFF ENABLE/DISABLE
10. V-SET BUTTON
11. I-SET BUTTON
12. OVP-SET BUTTON
13. I-MAX LIMITED SETTING
14. ROTARY

REAR PANEL
16. AC INPUT
17. ETHERNET
18. CAN ADDRESS SET
19. DIP SWITCHING FOR SYSTEM SETTING
20. I/O CONTROL INTERFACE INPUT
21. I/O CONTROL INTERFACE OUTPUT
22. TERMINAL-RESISTANCE(CAN)
23. CAN BUS to PC
24. CAN BUS to MAINFRAME
25. EXT-V&I SENSE INPUT
26. APG CONTROL

SOFTPANEL

Main Operation Menu
Program Sequence Function
Basic Control Function for 30 Channels
**CONTROL METHOD FOR PARALLELED**

**Type A - Control with CSU**: User can control via APG, CAN Bus/ Ethernet, and front panel manual control for paralleled operation.

![Diagram of Type A control method](image1)

**Type B - Control without CSU**: User can only control via CAN Bus for paralleled operation.

*Note: The SoftPanel can control four mainframes for paralleled operation.*

![Diagram of Type B control method](image2)

**Type C - Control without CSU or PC**: User can only control via remote on/off signal for paralleled operation.

*Note 1: User can NOT adjust the output voltage when parallel the output.*
*Note 2: The output voltage will fixed in factory default voltage.*
*Note 3: If need to adjust the output voltage, please adjust when stand alone.*
*Note 4: Time delay from output enable until output stable: 10s max.*

### Remote Control Interface

- **CAN Bus**: Standard
- **Ethernet**: Optional

### Analog Programming Interface (Standard)

- **Setting voltage (A/I)**: 0-10Vdc or 0-1 mA of FS (Resolution: 12 bits, Accuracy: 1% FS)
- **Setting current (A/I)**: 0-10Vdc or 0-1 mA of FS (Resolution: 12 bits, Accuracy: 1% FS)
- **Monitor voltage (A/O)**: 0-10V of FS (Resolution: 12 bits, Accuracy: 1% FS)
- **Monitor current (A/O)**: 0-10V of FS (Resolution: 12 bits, Accuracy: 1% FS)

### Remote Output ON/OFF

- **Dry contact**: Active High

### CV or CC mode Indicator

- **TTL Level High=CV mode**; **TTL Level Low=CC mode**

### OTP Indicator

- **Active High**: Active High

### System Fault Indicator

- **Active High**: Active High

### I/O Control Interface

- **I/O**: I/P=10, O/P=10

### I/P Definition

- Pin 1 & 2: Temperature sensor for bulk power system rack A (Active: open / default: short)
- Pin 3 & 4: Temperature sensor for bulk power system rack B (Active: open / default: short)
- Pin 5 & 6: Emergency stop for bulk power system
- Pin 7–20: Reserved

### O/P Definition

- Pin 1 & 2: OVP
- Pin 3–20: Reserved
- **AC Input Voltage**: Single phase 187-253VAC
- **Dimension**: High(2U) x width(19")

All specifications are subject to change without notice. Please visit our website for the most up to date specifications.
