

## Programmable DC Power Supply (Solar Array Simulation)

### MODEL 62150H-600S/1000S

#### Key Features :

- Voltage range : 0 ~600V&1000V
- 3U/15kW high power density module with easy master/slave parallel operation up to 150kW
- Fast transient response solar array simulation
- Simulation of multiple solar cell material 's I-V characteristic (fill factor)
- Simulation of dynamic irradiation intensity and temperature level from clear day to cloud cover conditions
- Shadowed I-V curve output simulation
- Low leakage current (< 3mA)
- Precision V & I measurements
- Auto I-V program: 100 I-V curves & Dwell time 1-15,000s
- Static & dynamic MPPT efficiency test
- Data recorded via softpanel
- Standard USB / RS232 / RS485 interface
- Optional GPIB / Ethernet interface
- Real time analysis of PV inverter 's MPPT tracking via softpanel
- Optional graphic user interface - softpanel for operation
- Real world weather simulation fast I-V curve update rate : 1s
- Build-in dynamic MPPT test profile of EN50530, Sandia, CGC/GF004

## PROGRAMMABLE DC POWER SUPPLY (SOLAR ARRAY SIMULATION) MODEL 62150H-600S/1000S

The latest programmable solar array simulator power supply 62150H-600S & 1000S released by Chroma provides simulation of Voc (open circuit voltage) up to 1000V and Isc (short circuit current) up to 25A. The 62150H provides an industry leading power density in a small 3U high package. The solar array simulator is highly stable and has a fast transient response design, which are both advantageous to MPPT performance evaluation on PV inverter devices.

The 62150H-600S/1000S has many unique advantages including high speed & precision digitizing measurement circuits with a 100kHz A/D, 25kHz D/A controlled I-V curve and a digital filter mechanism. It can simulate an I-V curve accurately and respond the mains ripple effect from the PV inverter. In addition, the built-in SAS I-V model in the standalone unit can easily program the Voc, Isc, Vmp, and Imp parameters for I-V curve simulation, without a PC controller.

The real solar array is influenced by various weather conditions such as irradiation, temperature, rain and shade by trees or clouds, which will affect the I-V curve output. The 62150H-600S/1000S is capable of storing up to 100 I-V curves into the simulator memory, with a programmed time interval range of 1-15,000 seconds. It can simulate the I-V curve from the early morning to nightfall for PV inverter testing or dynamic I-V curve transient testing.

The 62150H-600S/1000S has a built-in 16 bit digital control and precision voltage & current measurement circuits with a voltage accuracy of 0.05% + 0.05% F.S. and a current accuracy of 0.1% + 0.1% F.S.. It is ideal for real time MPPT analysis and tracking monitoring for PV inverters through our softpanel. The user can also enable the data recording function on the softpanel during the static MPPT performance test.

When high power solar array simulation is required it is common to connect two or more power modules in parallel. The 62150H-600S/1000S with a current range up to 25A and a voltage range up to 1000V offers a high power density envelope maximum of 15kW in a 3U package. It can easily parallel up to ten units in a Master/Slave configuration to provide 150kW with current sharing and synchronized control signals for commercial PV inverter (10kW – 100kW) testing. The 62000H series supplies have a smart Master/Slave control mode that makes the parallel operation fast and simple. In this mode, the master scales values and downloads data to slave units so that the programming is as simple as using a standalone unit.

The 62000H series dc power supplies are very easy to operate from the front panel keypad or from the remote controller via USB/RS232/RS485/APG (standard) and GPIB & Ethernet (optional). Its compact size (3U) makes it ideal for both benchtop and standard racking.

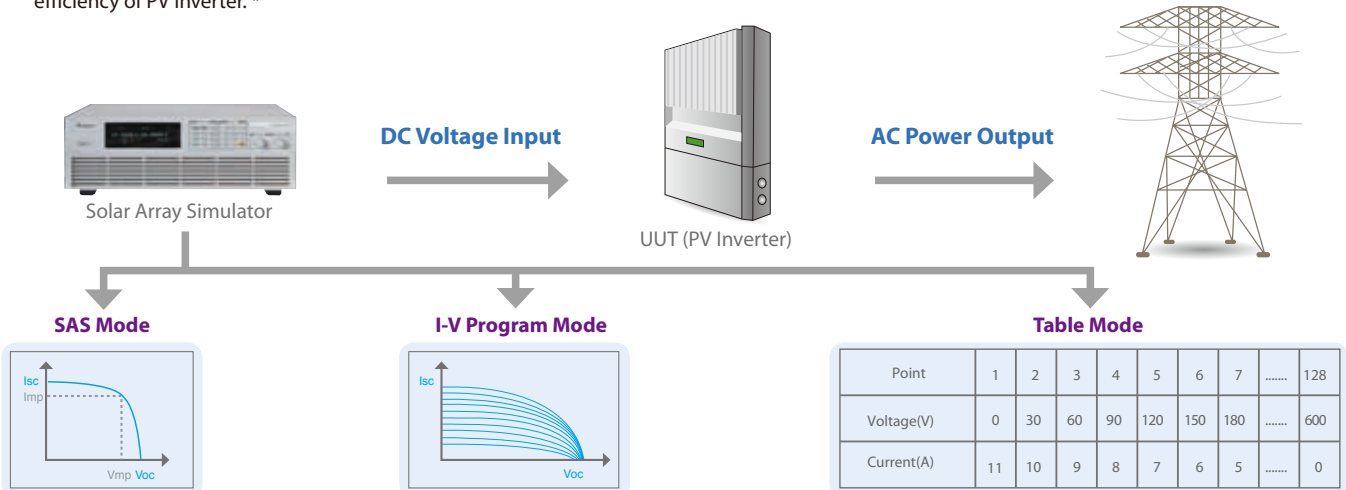

# Chroma

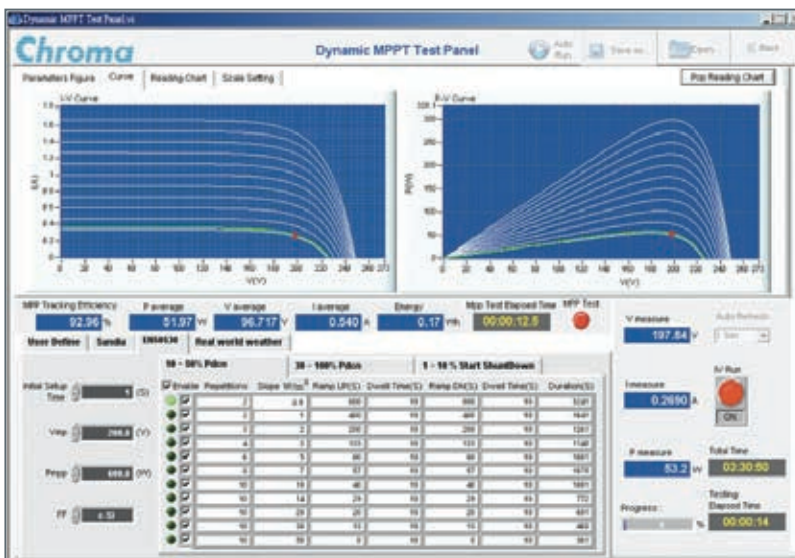

## SOLAR ARRAY I-V CURVE SIMULATION POWER SUPPLY

The Model 62150H-600S/1000S has a built in SAS model that can easily program the Voc, Isc, Vmp, Imp parameters to simulate different solar cell materials I-V characteristic outputs with fast response time. Moreover, the TABLE mode is capable of saving a 128 point array of user programmed voltages and currents via a remote interface. It can easily create a shadowed I-V curve and the I-V PROGRAM mode can save up to 100 I-V curves and dwell time intervals (1-15,000s) in memory. These advantages provide steady repetitive control conditions required for PV Inverter design as well as for verification testing. The solar array simulator is ideal for the following testing:

- Design and verify the maximum power tracking circuit and algorithm of the PV inverter.
  - Verify the high/low limit of operating input voltage allowed for the PV inverter.
  - Verify the high/low limit of operating input voltage allowed for the inverter's maximum power point.
  - Verify the static maximum power point tracking efficiency of the PV inverter.
  - Measure and verify the overall efficiency & conversion efficiency of PV inverter. \*
  - Verify the maximum power point tracking performance of the inverter for dynamic curves. (EN50530, Sandia, CGC/GF004 standard)
  - Verify the maximum power point tracking performance of the inverter under different time period conditions spanning from morning to nightfall.
  - Verify the maximum power point tracking mechanism of the inverter for the I-V curve when the solar array is shaded by clouds or trees.
  - Simulate the I-V curve under the actual environmental temperatures within burn-in room to do inverter burn-in testing.
- \*Requires an extra power meter.

## SOLAR ARRAY I-V CURVE SIMULATION SOFTPANEL

Solar Array Simulation Softpanel

Thin-Film

Standard Crystalline Array

High-efficiency Crystalline

The model 62150H-600S/1000S includes a graphical user Interface software through remote digital interface (USB / GPIB / Ethernet / RS232) control. The user can easily program the I-V curve of the 62150H-600S/1000S as well as the I-V & P-V curves for real-time testing. In addition it will display the MPPT status for the PV inverter. Readings and the report function with real-time monitoring using the softpanel are shown left.

### SIMULATES DIFFERENT SOLAR CELL MATERIALS I-V CHARACTERISTIC (FILL FACTOR)

The purpose of the PV inverter is to convert the dc voltage (from solar array) to the ac power (utility). The better a PV inverter can adapt to the various irradiation & temperature conditions of sun, the more power that can be fed into the utility grid over time. So, the MPPT performance is a very important factor for PV generation system. The model 62150H-600S/1000S is capable of simulating different types of standard crystalline, multi-crystalline and thin-film fill factor\* parameters to verify the MPPT tracking algorithm mechanism and efficiency.

$$*Fill\ Factor = (Imp * Vmp) / (Isc * Voc)$$

## STATIC MPPT EFFICIENCY TESTING

The 62150H-600S DC power supply with solar array simulation can program the I-V curve through SAS mode and table mode via front panel or softpanel easily and up to 100 I-V curves can be stored in the unit. The user can recall the I-V curve from 62150H-600S afterwards for testing and monitoring the MPPT performance of PV inverter with the real-time tracking feature. The softpanel allows the user to set the duration for static MPPT efficiency testing. Each curve test time should be set at between 60s-600s for best MPPT efficiency performance analysis.

$$\eta_{MPPT} = \frac{1}{P_{mpp} \cdot T_M} \sum V_{dc} \cdot I_{dc} \cdot \Delta T$$

$V_{dc}$  = Sampled value of the inverter's input voltage  
 $I_{dc}$  = Sampled value of the inverter's input current  
 $T_m$  = Overall measuring period  
 $P_{mpp}$  = MPPT power provided by the solar array simulator power supply

## DYNAMIC MPPT EFFICIENCY TESTING

The latest test standards EN50530, CGC/GF004 & Sandia have provided a procedure for testing patterns of the dynamic MPPT efficiency of inverters, those standards can accelerate the MPP tracking algorithm mechanism to the optimal for PV inverter manufactures. The advanced Dynamic MPPT Test function complies with EN50530, CGC/GF004, Sandia test regulations and can be controlled via the graphical softpanel by selecting CGC/GF004 or Sandia or EN50530 I-V mathematical expressions and test items. This function simulates the irradiation intensity and temperature change of the I-V curve under actual weather variations to test the PV inverter's dynamic MPPT performance. The GUI will calculate the MPPT performance for analysis after running the test. A test data recording function is integrated into the software where users can edit and control the test parameters to be recorded such as voltage, current, power, watt and MPPT performance along with the sampling interval (1 - 10,000s) and total time length to facilitate the analysis and validation of the PV inverter.

Order	Duration (s)	Vmax (V)	Iavg (A)	Power (W)	MPPT (%)	Start (s)	End (s)
1	10	10	10	100	10	0	10
2	10	20	20	400	20	10	20
3	10	30	30	900	30	20	30
4	10	40	40	1600	40	30	40
5	10	50	50	2500	50	40	50
6	10	60	60	3600	60	50	60
7	10	70	70	4900	70	60	70
8	10	80	80	6400	80	70	80
9	10	90	90	8100	90	80	90
10	10	100	100	10000	100	90	100

## SHADOW I-V CURVE SIMULATION

The table mode allows the user to create 128 points of I-V curve data consisting of voltage and current in Excel file format. This information is uploaded to the 62150H-600S memory via the softpanel. The user is able to program various I-V curves such as the shadow I-V curve simulation, which is used to verify the maximum power tracking capability of the PV inverter based on the I-V curve when the solar cell is shaded by clouds or trees.

## EVALUATING THE PV INVERTER'S CONVERSION EFFICIENCY \*

The photovoltaic I-V curve model of Sandia Lab and EN50530's built in the softpanel allows the user to input the maximum dc input power (Pmax), I-V Fill Factor, Vmin, Vnom and Vmax desired to test the PV Inverter. Click the maximum power percentage value (5%, 10%, 20%, 25%, 30%, 50%, 75%, 100%) desired directly and , the softpanel will produce the tested solar cell I-V curve automatically. Next, download it to the standalone unit to start simulating the I-V curve for the PV Inverter to test the conversion efficiency. \*Required an extra power meter.

## REAL WORLD WEATHER SIMULATION

The real world weather simulation function allows the user to import real conditions of irradiation and temperature profiles of a whole day from excel file to Softpanel, in order to simulate the irradiation intensity and temperature level from early morning to nightfall. It can also set the interval time resolution to 1s for I-V curve update rate and enable the user to perform MPPT tracking tests under the simulation of actual weather environments.

## AUTO RUN FUNCTION OF STATIC & DYNAMIC MPPT TESTING

In order to easily test the static & dynamic MPPT performance of standard EN50530 & Sandia for PV inverter, the SoftPanel has an auto run function, which the user only has to set the Vmin, Vnom, Vmax, Pmax, Stabilization time & Testing period time parameter and testing items of EN50530 & Sandia, then the softpanel can run tests automatically and generate reports after finished.

EN50530 Dynamic MPPT Efficiency Test Report ( 30%~100% )							
From-to W/m <sup>2</sup>	Delta W/m <sup>2</sup>		Pmp Value (W)	Vnom (V)	c-Si technology	Waiting time setting (S)

## REPORT FUNCTION

The softpanel also provides data recording capabilities, which include: voltage, current, power, energy and MPPT efficiency and the corresponding parameter sampling time (1s~10000s) for the recording process. The report can be utilized for R&D design characterization verification, QA verification and production quality control.

## MASTER / SLAVE PARALLEL OPERATION UP TO 150KW

When high power is required, it is common to connect two or more power supplies in parallel. The 62000H series supplies have a smart master / slave control mode making the parallel operation fast and simple. In this mode, the master scales values and downloads data to slave units with a high speed sync signal process and automatic current sharing control.

## CUSTOMIZATION SOLAR ARRAY SIMULATOR UP TO 600KW

### Model A620029 CSU

- Connect multiple 150kW solar array simulator in parallel (0~1000V/0~2500A/0~1500kW)
- Simultaneous display of output voltage and current
- Current sharing capability up to 1.5MW
- Standard USB/GPIB/Ethernet interface

#### Note :

In order to substantially reduce harmonic currents and increase energy efficiency, please adding a Schaffner ECOsine™-Passive Harmonic Filters device between power supply and grid.

## PANEL DESCRIPTION

### 1. POWER Switch

### 2. VFD Display

Display setting, readings and operating status

### 3. LOCK Key

Lock all settings

### 4. OUTPUT Key

Enable or disable the output

### 5. CONFIG Key

Set the system configuration

### 6. VOLTAGE Key

Set the output voltage

### 7. CURRENT Key

Set the output current

### 8. PROG Key

Program the sequence

### 9. NUMERIC Key

Set the data

### 10. ROTARY Key

Adjust the V&l and set the parameter

### 11. Analog programming interface

For analog level to program and monitor output voltage & current

### 12. RS-232 or RS-485 Interface (alternative)

### 13. System Bus

For master/slave parallel and series control

### 14. USB Interface

### 15. OUTPUT Terminal

Connect the output cable to a UUT

### 16. System Fan

With fan speed control

### 17. Current Sharing Terminal

Connect the cable to slave unit

### 18. Sense Terminal

Connect the UUT for voltage compensation

### 19. GPIB or ETHERNET Interface (optional)

### 20. AC Input Terminal

## ORDERING INFORMATION

Power Rating	62000H Series Programmable DC Power Supply
5kW	62050H-600S : Programmable DC Power Supply 600V/8.5A/5kW with Solar Array Simulation
10kW	62100H-600S : Programmable DC Power Supply 600V/17A/10kW with Solar Array Simulation
15kW	62150H-600S : Programmable DC Power Supply 600V/25A/15kW with Solar Array Simulation
	62150H-1000S : Programmable DC Power Supply 1000V/15A/15kW with Solar Array Simulation
Options	A620024 : GPIB Interface for 62000H series (Factory installed)
	A620025 : Ethernet Interface for 62000H series (Factory installed)
	A620026 : Rack Mounting kit for 62000H series
	A620027 : Parallelable Power Stage 15kW for 62150H-600S
	A620028 : Parallelable Power Stage 15kW for 62150H-1000S
	*A620029 : Control and Supervisor Unit for 150kW~600kW

**Note 1 :** GPIB or Ethernet Interface (alternative) , please specified at time of order.

**Note 2 :** Call for more information regarding the customized solar array simulator of 150kW~600kW.

\*Call for Availability.
