A PV system is an energy system which directly converts energy from the sunlight into electricity. Once light hits the solar cell (array), electricity is generated and the DC is collected at a PV inverter.

PV inverter is a device that changes DC power to AC power and is also a key component in PV systems. There are two main types of PV systems, Grid Connected or Off Grid. Grid connected systems are usually installed on a building and provide electricity directly into the mains supply. Off grid systems are usually used where power is required but access to a mains supply is unavailable.

Chroma provides PV inverter testing solutions based on its thirty years of experience in power electronics testing. These solutions include:

1. DC Power Supply 62000H-S Series: to simulate output characteristics of the solar array. It also provides a unique feature called solar array simulation function. This function is useful for MPPT performance evaluation on PV inverter devices.
2. Digital Power Meter 66200 Series: to measure PV inverter output parameters, such as V, I, P, PF, current harmonics & THD.
3. AC Power Source 6500/61500/61800 Series: to simulate mains power various scenarios.
4. AC Load 63800 Series: to sink current directly for off grid type PV inverters. The Chroma AC Source provides a voltage level as the reference for the PV inverter output. But the AC source can not sink current (energy); therefore, an external resistor is necessary for load simulation. Chroma also provides Automated Test Systems suitable for R&D, QA qualification and mass production.
Programmable DC Power Supplies with Solar Array Simulation

Model 62000H-S Series

Key Features

☑ Voltage range: 0~150V/600V/1000V/1800V
☑ 3U/15kW high power density module with easy master/slave parallel operation up to 1.5MW
☑ Simulation of multiple solar cell material's I-V characteristic (fill factor)
☑ Simulation of dynamic irradiation intensity and temperature level from clear day to cloud cover conditions
☑ Shadowed I-V curve output simulation up to 4096 data points
☑ Auto I-V program:
  - 100 I-V curves & Dwell time 1-15,000s
☑ Static & dynamic MPPT efficiency test
☑ Support up to ten-channel SAS control for multi-MPPT testing

The latest programmable solar array simulator power supply 62000H-S released by Chroma provides simulation of Voc (open circuit voltage) up to 1000V and Isc (short circuit current) up to 25A. The 62000H-S provides an industry leading power density in a small 3U high package. The solar array simulator is highly stable and has a fast transient response design, which are both advantage to MPPT performance evaluation on PV inverter devices. The Model 62020H-150S provides high precision and fast response of SAS for micro-inverter and solar charger testing.

Static & Dynamic MPPT Efficiency Testing

The model 62000H-S includes a graphical user interface software through remote digital interface (USB/GPIB/Ethernet/RS232) control. The user can easily program the I-V curve of the 62000H-S as well as the I-V & P-V curve for real-time testing. In addition it will display the MPPT status for the PV inverter. Readings and the report function with real-time monitoring using the Softpanel are shown below.

High Precision Power Measurement

Digital Power Meters

Model 66200 Series

Key Features

☑ Voltage Ranges:
  - 15/30/60/150/300/600 Vrms (66203/66204)
☑ Current Ranges:
  - 0.005/0.02/0.05/0.2/0.5/2/5/20 Arms (66203/66204)
☑ Other: Current Harmonics & THD
☑ Support 1P2W/1P3W/3P3W/3P4W wiring mode (66203, 3CH/66204, 4CH)
☑ Support ultra high precision DCCT 60A/200A optional kit for high current measurement application

Advance AC Power Sources

Model 61500/61800/6500 Series

Key Features
☑ Output: 500VA~300KVA/0~300VAC/424VDC, 1 or 3 phase
☑ Turn on, turn off phase angle control
☑ Programmable voltage and frequency slew rate
☑ Power line disturbance simulation LIST, PULSE, STEP modes
☑ Distortion waveform editor SYNTH and INTERHAR modes
☑ Measurement for RMS Voltage, Current, Power, PF, VA, VAR, Crest factor, peak and inrush current
☑ Standard AC source for IEC61000-3-2 testing
☑ Full 4 quadrant, fully regenerative up to 100% of output current rating (61800 Series)
☑ Provide 400V_in output voltage function (61800 Series option)
☑ Specially designed for PV inverter, smart grid and EV related test applications
☑ Meet IEEE 1547, IEC 61000-3-15, IEC 62116 standard test requirements
☑ Meet low voltage ride through LVRT test requirements
☑ The 61800 series is capable to deliver output voltage up to 800V_in based on customized modification *

Programmable AC Electronic Loads

Model 63800 Series

Programmable AC Electronic Loads are designed for testing Off-Grid Inverters. The 63800’s state of the art design uses DSP technology to simulate non-linear rectified loads with its unique RLC operating mode.

Key Features
☑ Phase: 1 or 3 (parallel)
☑ Power: 1.8KW, 3.6KW, 4.5KW
☑ Frequency: 45Hz ~ 440Hz
☑ Voltage: 50 ~ 350Vrms
☑ Power Factor: 0 ~ 1 lead or lag
☑ Crest Factor: 1.414 ~ 5
☑ Mode: CC, CR, CP, RLC

Optimized Equipment & Test Items
The Chroma 8000 ATS is equipped with optimized standard test items for PV inverters (the Unit Under Test), It meets EN50530, Sandia Lab, IEEE1547, 1547.1, UL 1741, GB/T 19939, and CGC/GF004/GF035 (NB/T 32004-2013) preliminary test requirements. The user is only required to define the test conditions and specifications for the standard test items to perform the test.

The optimized test item covers 5 types of power supply test requirements. The OUTPUT PERFORMANCE test verifies the output characteristics of the UUT. The INPUT CHARACTERISTIC test checks the UUT input parameters. TIMING & TRANSIENT tests the timing and transient states during protection. The PROTECTION TESTS trigger and test the protection circuit, the SPECIAL TEST provides means to test the most sophisticated UUT when unique test routines are needed.

Output Performances

Protection Tests
19. OV/UV Protection
20. OF/UF Protection
21. Anti-Islanding *

* The A800067 RLC load is required. This system can test automatically and meet regulations of multiple anti-islanding protection test conditions to save test time. It not only fits R&D and QC, but also very suitable for production line.

Software Platform of ATS
The Model 8000 Test Systems include the industries most sophisticated power supply testing software platform, PowerPro III. PowerPro III provides users with an open software architecture suited for a wide range of applications and devices.

Power Pro III is a Windows 98/NT/2000/XP/7 environment, which provides necessary computer peripherals.
